## Chapter - 2

## Introduction: -

Materials cost form an important Part of the total cost of a Product or Finished Goods. So proper control over Materials is necessary

Materials Cost is directly related with "Storage of Materials" if Materials is kept in larger quantity it block unnecessary capital investment. The function of storage of materials is performed by storekeeper. He is responsible for accepting, identifying and proper placing of Materials. Efficient storage requires the consideration of the following points.

## Level of Materials:

In order to avoid unnecessary investment in Materials the management should decide different levels of Materials to be kept in Stores

## Maximum Level: -

It is the largest quantity of a particular material, which should be kept in the Store at "any one time". Factors determine Maximum Level of Materials.
$>$ Store space
$>$ Availability of Working Capital
$>$ Seasonal Considerations
> Rate of Consumption of Materials and time necessary in obtaining new Materials
$>$ Rules framed by government
$>$ Economic order Quantity
$>$ Cost of Storage, Insurance, Interest on Capital invested in Stocks etc.

## Minimum Level:-

It is the lowest quantities of a particular Materials which must be maintained in store at "all time" so that production may not be stopped on account of non- availabilities of materials. It should be decided by taking into account the following factors.
> Average Rate of Consumption of Materials
$>$ Average time required to obtained delivery of Fresh Supplies.
> Re-order Level

## Re- order Level:-

It is that point at which further supplies must be ordered. When Materials reach at a particular level in Stores further supplies of order must be given this level is called Reorder Level.

## Danger Level: -

It is that level of Stock maintained in factory where Normal issue of Materials is not allowed. In normal circumstance, only emergency supply of Materials is allowed.

## ABC Analysis:-

It is a system of inventory control. It exercises discriminating control over different items of stores classified on the basis of the investment involved. Items are classified into the following categories:

A Category: Quantity less than 10\% but value more than 70\%
B Category: Quantity less than 20\% but value about $\mathbf{2 0 \%}$
C Category: Quantity about 70\% but value less than 10\%

## Economic Order Quantity or Re order Quantity :-

It is that size of order which gives most economy in purchasing of materials. It is the most economical order size at which Ordering Cost and Carrying Cost are equal. This is based on the assumption that all of Materials quantity is purchase on same price or in other words, no quantity discount is allowed at any quantity materials purchased
$>$ Ordering Cost: - It is the cost of placing an order or Cost involved in purchasing the Materials. It includes transportation and buying cost
> Carrying Cost /Storing Cost :-It is Cost of Keeping items in store It includes
$\checkmark$ Store Keeping Cost
$\checkmark$ Insurance Premium
$\checkmark$ Cost of Interest on Investments
$\checkmark$ Cost of Obsolescence and Losses

## Valuation of Materials Issues:-

Several methods of pricing Materials issues have been evolved which are as follows:
a) First- in First -out method: The Materials received first are to be issued first when Materials requisition is received. Materials left as closing Stock will be at the price of latest purchases.
b) Last-in first- out method: The Materials purchased last are to be issued first when Materials requisition is received. Closing Stock is valued at the oldest Stock price.
c) Simple Average Method:

Materials Issue Price $=\frac{\text { Total of unit price of each purchases that is available for issue }}{\text { Total } \mathrm{No}^{\prime} \text { 's of purchases that is available for issue }}$
d)Weighted Average Price Method: This method gives due weightage to quantities purchased and the purchase price to determine the issue price.

Materials Issue Price $=\frac{\text { Total Cost of Materials received }}{\text { Total Quantity purchased }}$

## Various Materials Losses:-

a) Wastage: Portion of basic raw Materials lost in processing having no recoverable value
b) Scrap: The incidental Materials residue coming out of certain manufacturing operations having low recoverable value.
c) Spoilage: Goods damaged beyond rectification to be sold without further processing.
d) Defectives: Goods which can be rectified and turned out as good units by the application of additional labour of other services.

## Basic Formulas

Re-order Level or Re-order Point or When the order should be placed =
Maximum Re-order Period $\times$ Maximum usage or consumption
Or
Minimum Level + (Average period of delivery or Re-order Period $\times$ Average Rate of Consumption)

## If Safety stock is given then

Re order Level = Safety Stock Level + Lead Time consumption
Lead Time Consumption $=\frac{\text { Annual Consumption }}{\text { No.of Days in a year }} \times$ Lead Time

- Lead Time means Normal Re-order Period or Average Re-order Period

## Safety Stock or Ideal inventory level =

Safety Stock $=\frac{\text { Annual Demand }}{365} \times($ Maximum Lead time - Normal Lead Time $)$
Certain times Safety Stock level is given as "Particular Days of Consumption" then safety Stock is calculated by using following formula:-

Safety Stock $=$ Per day Consumption $\times$ No. of days

## Maximum Level $=$

Re-order level + Re-order Quantity - (Minimum uses or Consumption $x$ Minimum Re-order Period or Minimum Lead-time)

## If Safety stock is given then

Maximum Level = Safety Stock + E.O.Q.

## Minimum Level =

Reorder Level - (Average Rate of Consumption or Normal Consumption $\times$ Average time required to obtain fresh Delivery or Average Re-order Period or Normal Re-order Period or Normal Lead period)

## Danger Level =

Average Uses or Consumption $\times$ Lead time or Re-order period for Emergency Purchase (Emergency Delivery Time)

## Average Stock Level =

$\frac{\text { Maximum Level + Minimum Level }}{2}$
or
Minimum Stock Level $+\frac{1}{2}$ (Re-order Quantity)

## Economic Order Quantity or Re-order Quantity =

Economic Order Quantity (E.O.Q) $=\sqrt{\frac{2 \times U \times P}{S}}$
Where $U=$ Quantity (in units or in kg ) consumed (used) or Purchased during the Year (If Annual consumption is not given then annual consumption must be find out)

P = Cost of Placing an order or Procurement Cost or Transportation Cost or Buying cost per order

S = Annual Storing Cost or Carrying Cost "per unit" "per annuam"
$=$ Purchase price of Commodity per unit $x$ Average cost of Carrying inventory per annuam

## (In normal Case Economic Order quantity is deemed as Re-order Quantity.)

## Total Inventory Cost = Cost of Purchase + Inventory Carrying Cost + Ordering Cost

Inventory Carrying Cost $=\frac{1}{2} \times$ Order Size or quantity $\times$ Carrying Cost p.u. p.a.
(Carrying cost is normally given as a percentage of cost per unit)
Ordering Cost $=$ No. of Orders $\times$ Cost per order
No. of Orders $=\frac{\text { Annual Demand }}{\text { Order Size or E.O.Q. }}$
Inventory Cost $=$ Carrying Cost + Ordering Cost

> Inventory Carrying and Ordering Cost $=$ $$
\sqrt{2 \times \text { Annual Consumption } \times \text { Ordering Cost } \times \text { Carrying Cost p.u.p.a }}
$$

## Inventory Turnover Ratio or Stock Turnover Ratio =

Inventory Turnover Ratio $=\frac{\text { Raw Materials Consumed }}{\text { Average Inventory }}$
Materials Consumed $=$ Opening Stock + Purchase - Closing Stock

* Materials Which turnover is high will be fast moving Materials

Note: - Inventory Turnover Ratio is the indicator of Rate of Consumption or Fast Moving, Slow Moving and Non-Moving items in the stores

## Inventory Turnover Period or No. of Days for which Inventory is Held or Stock Velocity Ratio

$=\frac{365 \text { days or } 12-\text { month }}{\text { Inventory Turnover Ratio }}$

Interval between two Consecutive optimum runs or Frequency of Placing an order:-

$$
\left(\frac{365 \text { days or } 12 \text { month }}{\frac{\text { Annual Demand for Consumption }}{\text { Optimum Run Size }}}\right)
$$

## Lead Time Demand

Lead Time Demand $=$ Usages or Demand per Day $\times$ Lead Time

## Best Order Quantity:-

To decide whether discount on purchase of material should be availed or not, compare total inventory cost before discount and after discount.

Total inventory cost will include ordering cost, carrying cost and purchase cost.

## Table Showing Best Order Quantity

| 1 | 2 | 3 | 4 | 5 | $\mathbf{5}$ | $\mathbf{6}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> orders | Order <br> Quantity | Purchase <br> Price per <br> Unit | Cost of <br> Purchase | Inventory <br> Carrying <br> Cost | Ordering <br> Cost | Total Cost |
|  |  | (given) | $3=1 \times 2$ | $1 / 2 \times$ Order Size <br> $\times$ Carrying <br> Cost per unit <br> per annuam | No. of orders <br> $\times$ Cost per <br> order | $6=4+5+$ <br> 6 |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |

Total cost of which order quantity is "Least" that order Quantity is deemed as Best order quantity.

## Under MODVAT credit system Quantity Discount, Trade Discount and Excise Duty are not considered in Purchase Price per Unit

## Following Five methods is called Historical Cost Method:-

## 1. FIFO Method:-First in First out Method

In this method closing Stock, consist of the latest consignment. In this method Materials are "first out" which are "in first" it means "old Materials are issued first" and as per sequence of entry Materials are issued

Stores Ledger (as per FIFO method)

| Date | Particulars | Receipt |  |  | Issued |  |  | Balance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Qt. | Rate | Amount | Qt. | Rate | Amount | Qt. | Rate | Amount |
| 1/1/07 | Opening Stock |  |  |  |  |  |  | 5000 | 10 | 50,000 |
| 3/1/07 | Purchase | 1000 | 12 | 12,000 |  |  |  | $\begin{aligned} & \mathbf{5 , 0 0 0} \\ & \hline 1,000 \end{aligned}$ | $\begin{aligned} & 10 \\ & \hline 12 \end{aligned}$ | $\begin{aligned} & 50,000 \\ & \hline 12,000 \end{aligned}$ |
| 5/1/07 | Issued 4,000 |  |  |  | 4,000 Old Materials are issued first | 10 | 40,000 | $\begin{aligned} & 1,000 \\ & \mathbf{1 , 0 0 0} \end{aligned}$ | $\begin{aligned} & 10 \\ & 12 \end{aligned}$ | $\begin{aligned} & 10,000 \\ & 12,000 \end{aligned}$ |
| 8/1/07 | Issued 500 |  |  |  | 500 | 10 | 5,000 | $\begin{gathered} \hline 500 \\ 1,000 \end{gathered}$ | $\begin{aligned} & 10 \\ & 12 \end{aligned}$ | $\begin{gathered} \hline 5,000 \\ 12,000 \end{gathered}$ |
| 9/1/07 | Purchase | 2000 | 11 | 22,000 |  |  |  | $\begin{gathered} \hline \mathbf{5 0 0} \\ \mathbf{1 , 0 0 0} \\ \mathbf{2 , 0 0 0} \\ \hline \end{gathered}$ | $\begin{aligned} & 10 \\ & 12 \\ & 11 \\ & \hline \end{aligned}$ | $\begin{gathered} \hline \mathbf{5 , 0 0 0} \\ 12,000 \\ 22,000 \\ \hline \end{gathered}$ |
| 15/1 | Issued 1,000 |  |  |  | $\begin{aligned} & 500 \\ & 500 \\ & \hline \end{aligned}$ | $\begin{aligned} & 10 \\ & 12 \\ & \hline \end{aligned}$ | $\begin{aligned} & \mathbf{5 , 0 0 0} \\ & \mathbf{6 , 0 0 0} \end{aligned}$ | $\begin{gathered} \mathbf{5 0 0} \\ 2,000 \end{gathered}$ | $\begin{aligned} & \hline 12 \\ & 11 \\ & \hline \end{aligned}$ | $\begin{gathered} \hline 6,000 \\ 22,000 \\ \hline \end{gathered}$ |
| 15/1 | Shortage |  |  |  | 50 | 12 | 600 | $\begin{gathered} 450 \\ 2,000 \end{gathered}$ | $\begin{aligned} & 12 \\ & 11 \\ & \hline \end{aligned}$ | $\begin{array}{r} 5,400 \\ 22,000 \\ \hline \end{array}$ |
| 18/1 | Purchase | 1000 | 15 | 15,000 |  |  |  | $\begin{gathered} \hline 450 \\ 2,000 \\ 1,000 \\ \hline \end{gathered}$ | $\begin{aligned} & 12 \\ & 11 \\ & 15 \\ & \hline \end{aligned}$ | $\begin{gathered} \hline 5,400 \\ 22,000 \\ 15,000 \\ \hline \end{gathered}$ |
| 30/1 | Issue 2,000 |  |  |  | $\begin{aligned} & 4,50 \\ & 1,550 \end{aligned}$ | $\begin{aligned} & 12 \\ & 11 \end{aligned}$ | $\begin{array}{r} 5,400 \\ \mathbf{1 7 , 0 5 0} \\ \hline \end{array}$ | $\begin{gathered} 450 \\ 1,000 \end{gathered}$ | $\begin{aligned} & \hline 11 \\ & 12 \\ & \hline \end{aligned}$ | $\begin{gathered} \hline 4,950 \\ 12,000 \\ \hline \end{gathered}$ |

Value of Closing Stock is $\mathbf{1 , 4 5 0}$ units for Rs.16,950

Note: - Treatment for shortage of materials is the same as that for issue of Materials \& treatment for return of material is the same as that for receipt of materials.

## 2. LIFO Method:- Last in First out Method

In this method, Materials are "first out" which are "Last in" it means "New Materials are issued first" and as per sequence of entry of materials are issued.

Stores Ledger (as per LIFO method)

| Date | Particulars | Receipt |  |  | Issued |  |  | Balance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Qt. | Rate | Amount | Qt. | Rate | Amount | Qt. | Rate | Amount |
| 1/1/07 | Opening Stock |  |  |  |  |  |  | 5000 | 10 | 50,000 |
| 3/1/07 | Purchase | 1000 | 12 | 12,000 |  |  |  | $\begin{array}{r} \mathbf{5 , 0 0 0} \\ \mathbf{1 , 0 0 0} \end{array}$ | 10 | 50,000 12,000 |
| 5/1/07 | Issued 4,000 |  |  |  |  | $12$ <br> 10 | $\begin{aligned} & 12,000 \\ & 30,000 \end{aligned}$ | 2,000 | 10 | 20,000 |
| 8/1/07 | Issued 500 |  |  |  | 500 | 10 | 5,000 | 1,500 | 10 | 15,000 |
| 9/1/07 | Purchase | 2000 | 11 | 22,000 |  |  |  | $\begin{array}{r} 1,500 \\ \mathbf{2 , 0 0 0} \\ \hline \end{array}$ | $\begin{aligned} & \hline \mathbf{1 0} \\ & \mathbf{1 1} \\ & \hline \end{aligned}$ | $\begin{aligned} & 15,000 \\ & 22,000 \\ & \hline \end{aligned}$ |
| 15/1 | Issued 1,000 |  |  |  | 1,000 | 11 | 11,000 | $\begin{aligned} & 1,500 \\ & 1,000 \end{aligned}$ | $\begin{aligned} & 10 \\ & 11 \end{aligned}$ | $\begin{aligned} & 15,000 \\ & 11,000 \\ & \hline \end{aligned}$ |
| 15/1 | Shortage |  |  |  | 50 | 11 | 550 | $\begin{gathered} 1,500 \\ \mathbf{9 5 0} \\ \hline \end{gathered}$ | $\begin{aligned} & 10 \\ & 11 \\ & \hline \end{aligned}$ | $\begin{aligned} & 15,000 \\ & 10,450 \\ & \hline \end{aligned}$ |
| 18/1 | Purchase | 1000 | 15 | 15,000 |  |  |  | $\begin{gathered} 1,500 \\ 950 \\ 1,000 \end{gathered}$ | $\begin{aligned} & 10 \\ & 11 \\ & 15 \end{aligned}$ | $\begin{aligned} & 15,000 \\ & 10,450 \\ & 15,000 \\ & \hline \end{aligned}$ |
| 30/1 | Issue 2,000 |  |  |  | $\begin{gathered} 1,000 \\ 950 \\ 50 \\ \hline \end{gathered}$ | 15 11 10 | $\begin{gathered} 15,000 \\ 10,450 \\ 500 \end{gathered}$ | 1,450 | 10 | 14,500 |

Value of Closing Stock is $\mathbf{1 , 4 5 0}$ units for Rs. $\mathbf{1 4 , 5 0 0}$
Note: - Treatment for shortage of materials is the same as that for issue of Materials \& treatment for return of material is the same as that for receipt of materials.

## LIFO has following advantages:-

(a) The cost of the materials issued will be reflecting the current market price.
(b) The use of the method during the period of rising prices does not reflect undue high profit in the income statement.
(c) In the case of falling price, profit tend to rise due to lower materials cost, yet the finished goods appear to be more competitive and are at market price.
(d) During the period of inflation, LIFO will tend to show the correct profit.

## 3. Average Price Method or Simple Average Price Method:

In this method, the price is calculated by dividing total of unit purchase prices of different lots in Stock by the number of prices used in the calculation. Unit prices of latest consignment are taken into account for this purpose. Every time when an issue is made, a new average is worked out. Normally it is presumed that materials received first will be issued first and, therefore, the rate of the Materials not in Stock is ignored while calculating average rate.

Stores Ledger (As per Simple Average Price method)

| Date | Particulars | Receipt |  |  | Issued |  |  | Balance |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Qt. | Rate | Amount | Qt. | Rate | Amount | Qt. | Amount |
| $\mathbf{1}^{\text {st July }}$ |  |  |  |  |  |  |  | 500 | 10,000 |
|  | 4 July | Purchase | 400 | 21 | 8,400 |  |  |  | 900 |
| 6 July | Issued 600 |  |  |  | 600 | 20.50 | 12,300 | 300 | 6,100 |
| 8 July | Purchase | 800 | 24 | 19,200 | - | - | - | 1,100 | 25,300 |
| 9 July | Issue 500 | - | - | - | 500 | 22.50 | $\mathbf{1 1 , 2 5 0}$ | 600 | 14,050 |
| 13 July | Issue 300 | - | - | - | $\mathbf{3 0 0}$ | 24,00 | 7,200 | 300 | 6,850 |
| 24 July | Purchase 500 | 500 | 25 | 12,500 | - | - | - | 800 | 19,350 |
| 28 July | Issue 400 | - | - | - | 400 | 24.50 | $\mathbf{9 , 8 0 0}$ | 400 | 9,550 |

Note: - Treatment for shortage of materials is the same as that for issue of Materials \& treatment for return of material is the same as that for receipt of materials.

Working Note:-
Various issue prices are computed as follows:-
On $6^{\text {th }}$ July $=(20+21) / 2=$ Rs. 20.50
On $9^{\text {th }}$ July $=(21+24) / 2=$ Rs. 20.50
On $13^{\text {th }}$ July $=(24+1) / 2=$ Rs. 20.50
On $28^{\text {th }}$ July $=(24+25) / 2=$ Rs. 20.50
Value of Closing Stock is 400 units for Rs.9,550
In this method Average Rate of those goods are taken which are available in stock
4. Weighted Average Price Method:-

Under weighted Average Price Method, cost of goods available for sale during the period is aggregated and then divided by number of units available for sale during the period to calculate weighted average price per unit. Thus

Weighted Average Price per unit $=\frac{\text { Total cost of goods available for sale during the period }}{\text { Total number of units available for sale during the period }}$

## Closing Stock $=$ No. of units in Stock $\times$ weighted Average price per unit

Cost of Goods sold $=$ No. of units sold $\times$ weighted average price per unit

## Techniques of Inventory Control:

1. Setting the various Stock Level

- Minimum Level
- Maximum Level
- Re-order Level
- Danger Level

## Assignments (50)

Type 1:- Level of Materials
5 Durestions
Type 2:- E.O.Q. \& Level of Materials
20 Puestions
Type 3:- E.O.Q at Quantity Discount 5 Duestions
Type 4:- LIFO \& FIFO IO Dacstions
Type 5:- Mics. Questions IOMaestions

## Type 1:- Level of Materials

## 5

## Q. 1

The following information is available in respect of materials number 30:

| Re-order quantity | $\mathbf{1 , 5 0 0}$ units |
| :--- | :--- |
| Re-order period | 4 to 6 weeks |
| Maximum consumption | 400 units per week |
| Normal consumption | 300 units per week |
| Minimum consumption | 250 units per week |

Calculate:
(1) Re-order Level
(2) Minimum Level
(3) Maximum Level and
(4) Average Stock Level

## B.Com (P) 2012 (External) [9 Marks]

(i) Re-order Level = Maximum Consumption $\times$ Maximum Re-order period

$$
=400 \times 6=2,400 \text { units }
$$

(ii) Minimum Level = Re-Order Level - (Average Consumption $\times$ Average Re-order period )

$$
=2,400-(300 \times 5)=2,400-1,500=900 \text { units }
$$

(iii) Maximum Level = Re-Order level + Re-order quantity - (Minimum Consumption $\times$ Minimum Re order period)

$$
=2,400+1,500-(250 \times 4)=3,900-1,000=2,900 \text { units }
$$

(iv) Average Stock Level $=\frac{\text { Minimum Stock Level }+ \text { Maximum Stock Level }}{2}$

$$
\begin{gathered}
=\frac{900+2,900}{2}=1,900 \text { Units } \\
\text { Or }_{\mathbf{r}}
\end{gathered}
$$

Average Stock Level $=$ Minimum Stock Level $+\frac{1}{2} \times($ Re-order Quantity $)$

$$
=900+\frac{1}{2} \times(1,500)=900+750=1,650 \text { Units }
$$

## Q. 2

The following information is available in respect of Materials:
Re-order Quantity
Re-order period (lead time)
Consumption (usage)
$\quad$ Maximum - 500 Units per week
$\quad$ Normal - 400 Units per week
$\quad$ Minimum - 300 Units per week

Calculate (i) Re-order Level (ii) Minimum Stock Level (iii) Maximum Stock Level.

## B.Com (P) 2007 (Regular) [3 Marks]

a) Re-order Level $=$ Maximum Consumption $\times$ Maximum Re-order Period.

$$
=500 \times 8=4,000 \text { Units }
$$

b) Minimum Level = Re-order Level - (Average Consumption $\times$ Average Re-order period)

$$
=4,000-(400 \times 6)=4,000-2,400=1,600 \text { units }
$$

c) Maximum Stock Level = Re-order Level + Re-order Quantity - (Minimum consumption $\times$ Minimum Re-order period)

$$
\begin{aligned}
& =4,000+2,000-(300 \times 4) \\
& =6,000-1,200=4,800 \text { units }
\end{aligned}
$$

## Q. 3

Two Components A and B are used as follows

| Normal usage | 50 units per week each |
| :--- | :--- |
| Minimum usage | 25 units per week each |
| Maximum usage | 75 units per week each |
| Re-order quantity | A $: 300$ Units |
|  | B :500 units |
| Re-order period | A: 4 to 6 weeks |
|  | B $: 2$ to 4 weeks |

Calculate for each Component:
(a) Re-order Level
(b) Minimum Level
(c) Maximum Level
(d) Average Stock Level
a) Re-order Level $=$ Maximum Consumption $\mathbf{x}$ Maximum Re-order Period

$$
\begin{aligned}
A & =6 \times 75 \quad 450 \text { units } \\
B & =4 \times 75=300 \text { units }
\end{aligned}
$$

b) Minimum Level $=$ Re-order Level - (Average Consumption $\times$ Average Re-order period)

$$
\begin{aligned}
& A=450-(50 \times 5)=200 \text { units } \\
& B=300-(50 \times 3)=150 \text { units }
\end{aligned}
$$

c) Maximum Stock Level = Re-order Level + Re-order quantity - (Minimum consumption $\mathbf{x}$ Minimum

$$
\begin{array}{ll}
A=450+300-(25 \times 4) & =650 \text { units } \\
B=300+500-(25 \times 2) & =750 \text { units }
\end{array}
$$

d) Average Stock Level $=$ Minimum Stock Level $+\frac{1}{2} \times$ Re-order quantity

$$
\begin{aligned}
& A=200+\left(\frac{1}{2} \times 300\right)=350 \text { units } \\
& B=150+\left(\frac{1}{2} \times 500\right)=400 \text { Units }
\end{aligned}
$$

Or
Average Stock Level $=\frac{\text { Maximum Stock Level }+ \text { Minimum Stock Level }}{2}$

$$
\begin{aligned}
& A=\frac{650+200}{2}=425 \text { Units } \\
& B=\frac{750+150}{2}=450 \text { Units }
\end{aligned}
$$

## Q. 4

In manufacturing its products $Z$, a company uses two types of Raw Materials $A$ and $B$ respect of which the following information is supplied:

One unit Z requires 10 Kg . of A and 4 Kg of $B$ Materials. Price per kg. of A Materials is Rs. 10 and that of $B$ is Rs. 20. Re-order quantity of $A$ and $B$ Materials are $10,000 \mathrm{~kg}$. and $5,000 \mathrm{~kg}$. Re-order level of $A$ and $B$ Materials are $8,000 \mathrm{~kg}$. and 4,750 kg. respectively. Weekly production varies from 175 units to 225 units average 200 units. Delivery period of A Materials is $\mathbf{1}$ to 3 weeks and $B$ Materials is $\mathbf{3}$ to 5 weeks.

Compute:
(i) Minimum Stock Level of A
(ii) Maximum Stock Level of B

## Minimum Stock Level of A

$=$ Re-order Level - (Average Consumption $\times$ Average Delivery Period)
$=8,000-(200 \times 10 \times 2)=4,000 \mathrm{~kg}$.
Maximum Stock Level of $B$
$=$ Re-Order Quantity + Re- Order Level - (Minimum Consumption $\times$ Minimum Delivery Period)
$=5,000+4,750-(175 \times 4 \times 3)=7,650 \mathrm{~kg}$.

## Q. 5

In manufacturing its products, a company uses three raw materials $A, B$ and $C$ in respect of which the following apply:

| Raw <br> Materials | Usage per <br> unit of <br> product <br> $(\mathrm{Kg})$ | Re-order <br> quantity <br> (Kg) | Price per Kg <br> (Rs.) | Delivery <br> period <br> (weeks) | Order Level <br> (Kg) | Minimum <br> Level <br> (Kg) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | 10 | 10,000 | 0.10 | 1 to 3 | $8,000 \mathrm{~kg}$ | - |
| B | 4 | 5,000 | 0.30 | 3 to 5 | $4,750 \mathrm{~kg}$ | - |
| C | 6 | 10,000 | 0.15 | 2 to 4 | - | 2,000 |

Weekly production varies from 175 to 225 units, averaging 200. What would you except the quantities of the following to be:
(i) Minimum Stock Level of A;
(ii) Maximum Stock Level of B;
(iii) Reorder Level of C; and
(iv) Average Stock Level of A

## Type 2:- E.O. Q. Ef Level of Materials 25

## Q. 6

From the following particulars, find Economic Order Quantity (EOQ)
Annual Demand $=\quad 3,200$ Units
Unit Cost = Rs. 6
Cost of Carrying Inventory = 25\% p.a.
Cost of one procurement = Rs. 150
$\mathbf{E O Q}=\sqrt{\frac{2 \times U \times P}{S}}$
U = Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S$ = Cost of storing one unit for a year
$=\sqrt{\frac{2 \times 3,200 \times 150}{1.5}}=800$ Units

## Q. 7

A Factory requires 1,500 units of an item per month, each costing Rs. 27. The cost per order is Rs. 150 and the inventory carrying charges work out to $20 \%$ of the average inventory. Find out the economic order quantity and the number of orders per year.

## B.Com (P) 2009 (Supply.)

$\mathbf{E O Q}=\sqrt{\frac{2 \times U \times P}{S}}$
U = Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
S = Cost of storing one unit for a year
$E O Q=\sqrt{\frac{2 \times 18,000 \times 150}{5.4}}=1,000$ units.
Number of orders per year $=\frac{\text { Annual Consumption }}{\text { EOQ }}=\frac{18,000}{1,000}=18$

## Q. 8

From the following, calculate Economic Order Quantity and the number of order to be placed per quarter.

Quarterly Consumption 2000 kg.
Cost of placing one order Rs. 50
Cost per unit
Storage cost
Rs. 4

80\% on average inventory.
B.Com (H) 1997 / B.Com (P) 2009 (External) [7 Marks]
$\mathrm{EOQ}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathbf{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S$ = Cost of storing one unit for a year
$\mathrm{EOQ}=\sqrt{\frac{2 \times 8,000 \times 50}{3.2}}=500 \mathrm{~kg}$.
No. of order per quarter $=\frac{\text { Quarterly Consumption }}{\text { E.O.Q. }}=\frac{2,000}{500}=4$ Orders.

## Q. 9

From the following information relating to a type of Raw Materials, Calculate EOQ:

| Monthly demand | 200 unit |
| :--- | :---: |
| Unit price | Rs. 5 |
| Order cost per order | Rs. 12 |
| Storage cost | $2 \%$ p.a. |
| Interest rate | $10 \%$ p.a. |

## B.Com (P) 2007 (Regular) [4 Marks]

$\mathbf{E O Q}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathrm{U}=$ Annual Usage $=200 \times 12=2,400$ units
$\mathbf{P}=$ Cost of placing an order $=$ Rs. 12
S = Cost of storing one unit for a year = ( $10 \%+2 \%)$ of Rs. $5=$ Rs. 0.60
$E O Q=\sqrt{\frac{2 \times 2,400 \times 12}{0.60}}=309.83$ unit (Approx)
Q. 10

From the following information, calculate economic order quantity and the number of orders to be placed in one quarter of the year for product of $X$ :

| Quarterly consumption of Materials | $\mathbf{2 , 0 0 0} \mathbf{~ k g}$ |
| :--- | :--- |
| Cost of placing one order | Rs. 50 |
| Cost per unit | Rs. $\mathbf{4 0}$ |
| Storage and carrying cost | $\mathbf{8 0 \%}$ on average inventory |

B.Com (P) 2012 (Regular) [7 Marks]
E.O.Q. $=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathrm{U}=$ Annual Consumption $=2,000 \times 4=8,000 \mathrm{~kg}$
$\mathbf{P}=$ Buying Cost per order $=$ Rs. 50
S = Storage and Carrying Cost $=\mathbf{8 0 \%}$ on average inventory
E.O.Q. $=\sqrt{\frac{2 \times 8,000 \times 50}{32}}=158.11 \mathrm{~kg}$ (App)

Number of orders per quarter $=\frac{\text { Quarterly consumption }}{\text { E.0.Q. }}=\frac{2,000}{158.11}=12.65$ (app.)

## Q. 11

A company manufactures 5,000 units of a product per month. Cost of placing an order is Rs. 100. The purchase price of raw materials is Rs. 10 per kg. The re-order period is 4 to 8 weeks. The consumption of raw Materials varies from 100 kg . to 450 kg per week. The average consumption being 275 kg , the carrying cost of inventory is $\mathbf{2 0 \%}$ per annum. You are required to calculate:
(i) Reorder Quantity
(ii) Reorder Level

## B.Com (P) 2005 (External) [5 Marks]

(i) Re-Order Level $=$ Maximum Consumption $\times$ Maximum Re-order Period.

$$
=450 \mathrm{~kg} \times 8 \text { weeks }=3,600 \mathrm{~kg}
$$

(ii) $\mathrm{EOQ}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathbf{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S=$ Cost of storing one unit for a year

$$
=\sqrt{\frac{2 \times 14,300 \times 100}{2}}=1,196 \mathrm{~kg} \text { (approx) }
$$

## Q. 12

A Company uses 2,500 units of a material per month. Cost of placing an order is Rs. 150 . The cost per unit is Rs. 20. The re-order period is 4 to 8 weeks. The minimum consumptions of raw materials are 100 units whereas the average consumption are 275 unit. The carrying cost of inventory is $20 \%$ per annum.

## Calculate:

1. Re-order quantity and
2. Re-order Level
B.Com (P) 2009 (Regular) [6 Marks]
$\mathrm{EOQ}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathrm{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S=$ Cost of storing one unit for a year
$\mathrm{EOQ}=\sqrt{\frac{2 \times 30,000 \times 150}{4}}=1,500$ units
Re-order Level = Maximum Re-order Period $\times$ Maximum usage

$$
=8 \times 450=3,600 \text { units }
$$

Average Consumption $=\frac{\text { Minimum Consumption }+ \text { Maximum Consumption }}{2}$
275 units $=\frac{100+\text { Maximum Consumption }}{2}$
Maximum consumption or Maximum usage $=450$ units

## Q. 13

Medical Aids Co. manufactures a special product A. The following particulars were collected for the year 2014.

|  |  |
| :--- | :---: |
| Cost of placing an order | Rs. 100 |
| Annual carrying cost per unit | Rs. 15 |
| Normal usage | 50 unit per week |
| Minimum usage | 25 units per week |
| Maximum usage | 75 unit per week |
| Re-order period | 4 to 6 week |

Compute from the above (i) Re-order quantity (ii) Re-order Level (iii) Minimum Level (iv) Maximum Level (v) Average Stock Level (weeks in a year 52).

> B.Com (P) 2011(Regular) [7 Marks]
$\mathbf{E O Q}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathrm{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S=$ Cost of storing one unit for a year

$$
=\sqrt{\frac{2 \times 2,600 \times 100}{15}}=186 \text { units }
$$

Annual Demand for input units
$=52$ weeks $\times$ Normal usage of input unit per week
$=52 \times 50=2,600$ units.
(i) Re-order Level $=$ Maximum Consumption $\times$ Maximum Re-order Period.

$$
=6 \text { weeks } \times 75 \text { units }=450 \text { units. }
$$

(ii) Minimum Stock Level = Re-order Level - (Average Consumption $\times$ Average Re-order period)

$$
\begin{aligned}
& =450 \text { units }-(50 \text { units } \times 5 \text { weeks }) \\
& =450 \text { units }-250 \text { units }=200 \text { units. }
\end{aligned}
$$

(iii) Maximum Stock Level = Re-order level + Re-order Quantity - (Minimum consumption $\times$ Minimum Re-order Period)

$$
=450-(25 \times 4)+186=450-100+186=536 \text { units }
$$

(iv) Average Stock Level $=\frac{\text { Minimum Stock Level }+ \text { Maximum Stock Level }}{2}$

$$
=\frac{200+536}{2}=368 \text { units }
$$

## Q. 14

Calculate:
(i) Maximum Stock Level;
(ii) Re-order Level
(iii) Minimum Stock Level

Form the information of Materials $\mathbf{A}$ as given below:
Re-order quantity 3,600 unit
Re-order period:
Minimum 3 weeks
Maximum 5 week
Maximum consumption 900 units per week
Minimum consumption 300 units per week

## B.Com (P) 2013(External) [9 Marks]

(i) Re-Order Level $=$ Maximum Consumption $\times$ Maximum Re-order Period.

$$
=900 \times 5=4,500 \text { units }
$$

(ii) Minimum Stock Level $=$ Re-order Level $-($ Average Consumption $\times$ Average Re-order period)

$$
\begin{aligned}
& =4,500-(600 \times 4) \\
& =4,500-2,400=2,100 \text { units }
\end{aligned}
$$

(iii) Maximum Stock Level = Re-order Level + Re-order Quantity - (Minimum Consumption $\times$ Minimum Re-order Period
$=(4,500+3,600)-(300 \times 3)$

$$
=\mathbf{8 , 1 0 0}-\mathbf{9 0 0}=7,200 \text { units }
$$

## Q. 15

From the following information, calculate:
(i) Economic Order Quantity
(ii) Total annual carrying and ordering cost at that quantity.
(iii) Re-order Level
(iv) Minimum Level
(v) Maximum Level
(vi) Average Stock Level
(vii)Danger level

Rate of Usage: 5 Kg. per unit of finished products. Weekly production of finished product varies from 50 units to 150 units.
Purchase price of input unit: Rs. 20
Annual carrying cost: 6.5\%
Ordering cost per order: Rs. 100.
Lead-time: 3 weeks to 7 weeks, For emergency purchase 2 weeks.
B.Com (P) 2008(External) [10 Marks]
$\mathrm{EOQ}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathrm{U}=52$ weeks $\times 100$ units $\times 5 \mathrm{~kg}=\mathbf{2 , 6 0 0 0}$ unit
P = Rs. 100
S = 6.5\% of Rs. $20=$ Rs. 1.30
E.O.Q. $=\sqrt{\frac{2 \times 26,000 \times 100}{1.30}}=2,000$ units
(ii) Annual Carrying Cost $=\frac{1}{2} \times$ E.O.Q. $\times$ Carrying Cost per unit per annum

$$
=\frac{1}{2} \times 2,000 \times 1.3=\text { Rs. } 1,300
$$

Annual Ordering Cost $=\frac{\text { Annual Consumption }}{\text { E.o.Q. }} \times$ Ordering Cost

$$
=(26,000 / 2,000) \times 100=\text { Rs. } 1,300
$$

Total annual carrying cost and annual ordering cost $=$ Rs. 1,300 + Rs. 1,300 $=$ Rs. 2,600
(iii) Re-order Level $=$ Maximum Usage $\times$ Maximum Lead period

$$
=(150 \times 5) \times 7=5,250 \text { units }
$$

(iv) Minimum Level $=$ Re-order $-($ Average usage $\times$ Average lead period)

$$
=5,250-[(100 \times 5) \times 5]=2,750 \text { Units }
$$

(v) Maximum Level $=$ Re-order Level + Re-order Quantity - (Minimum usage - Minimum Lead Time)

$$
=5,250+2,000-(50 \times 5 \times 3)=6,500 \text { units }
$$

(vi) Average Level $=\frac{\text { Minimum Stock Level }+ \text { Maximum Stock Level }}{2}=\frac{2,750+6,500}{2}=4,625$ units
(vii)Danger Level $=$ Average usage $\times$ Lead Time for Emergency Purchases

$$
=(100 \times 5) \times 2=1,000 \text { units }
$$

## Q. 16

The following data pertaining to materials $\mathbf{X}$ :

Supply period
Consumption rate
Maximum 600 unit per month
Minimum 100 unit per month
Normal
Yearly
Stores costs are 50\% to Stock value.
Ordering costs are Rs. 400 per order
Price per unit of Materials Rs. 64

## Compute:

(i) Re-order Level
(ii) Minimum Stock Level
(iii) Maximum Stock Level
(iv) Average Stock Level

## 4 to 8 month

 300 unit per month 3600 unitB.Com (P) 2004 (Regular) [8 Marks] / 2004 (External) [7 Marks]
(i) Re-order Level $=$ Maximum Consumption $\times$ Maximum Supply Period $=600 \times 8=4,800$ units
(ii) Minimum Stock Level = Re-order Level - (Normal Consumption $\times$ Normal Supply Period)

$$
=4,800-(300 \times 6)=4,800-1,800=3000 \text { units. }
$$

(iii) Maximum Stock Level
$=$ Re-order Level + Re-order Quantity $-($ Minimum Consumption $\times$ Minimum Supply Period)
$=4,800+300-(100 \times 4)=4,700$ units.
(iv) Average Stock Level $=\frac{\text { Minimum Stock Level }+ \text { Maximum Stock Level }}{2}=\frac{4,700+3,000}{2}=3,850$ units

## Working Note:

$\mathrm{EOQ}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathrm{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S$ = Cost of storing one unit for a year
$E O Q=\sqrt{\frac{2 \times 3,600 \times 400}{32}}=300$ units
Q. 17
A.S. Ltd. produces a product 'RED' using two components $X$ and $Y$. Each unit of 'RED' Requires 0.4 kg of $X$ and 0.6 kg of $Y$. Weekly production varies from 350 units to 450 units averaging 400 units. Delivery period for both the components is $\mathbf{1}$ to 3 weeks. The economic order quantity for $\mathbf{X}$ is $\mathbf{6 0 0}$ kgs and for $\mathbf{Y}$ is 1,000 kgs. Calculate.
(i) Re-order Level of $\mathbf{X}$;
(ii) Maximum Level of $\mathbf{X}$;
(iii) Minimum Level of $\mathbf{Y}$
B.Com (H) 2008 [5Marks]
(i) Re-order Level of $\mathbf{X}=$ Maximum Consumption $\times$ Maximum Recorder period

$$
=(450 \times 0.4) \times 3=540 \mathrm{~kg} .
$$

(ii) Maximum Level of $\mathrm{X}=$ Re-order Level + Re-order Quantity - (Minimum Consumption $\times$ Minimum Reorder Period)

$$
=540+600-(350 \times 0.4 \times 1)=1,000 \mathrm{~kg} .
$$

(iii) Minimum Level of $\mathbf{Y}=$ Re-order Level $-($ Normal Consumption $\times$ Normal Reorder Period)

$$
\begin{aligned}
& =(450 \times 0.6 \times 3)-(400 \times 0.6 \times 2) \\
& =810-480=330 \mathrm{Kg} .
\end{aligned}
$$

## Q. 18

Z Ltd. provides the following information in respect of Materials $\mathbf{- R}$.

Supply period 5 to 15 days. Rate of Consumption

Average
Maximum
Yearly
Ordering costs are Rs. 20 per order. Purchase Price per unit is Rs. 50
Storage costs are $10 \%$ of unit value

## Compute:

(i) Re-order Level
(ii) Minimum Level
(iii) Maximum Level

## B.Com (H) 1998 / B.Com (P) 2008 (External) [8 Marks]

(i) Re-Order Level $=$ Maximum Consumption $\times$ Maximum Re-order Period $=20 \times 15=300$ Units.
(ii) Minimum Level = Re-order Level - (Average Consumption $\times$ Average Re-order period)

$$
=300-(15 \times 10)=150 \text { Units }
$$

(iii) Maximum Level = Re-order Level + Re-order Quantity - (Minimum Consumption $\times$ Minimum Re-order period)
$=300+200-(10 \times 5)=450$ Units.

## Working Note:-

$\mathbf{E O Q}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathbf{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
S = Cost of storing one unit for a year
$=\sqrt{\frac{2 \times 5,000 \times 20}{5}}=200$ units

## Q. 19

From the following information, calculate Re-order quantity:

| Maximum re-order period | 8 week |
| :--- | :---: |
| Average Stock | 400 unit |
| Average usage | 50 unit per week |
| Maximum usage | $\mathbf{8 0}$ unit per week |
| Average re-order period | $\mathbf{6}$ week |

## B.Com (P) 2010 (External) [7 Marks]

Re-order Level $=$ Maximum Consumption $\times$ Maximum Re-order Period.

$$
=80 \times 8=640 \text { units }
$$

Minimum Stock Level $=$ Re-order Level $-($ Average Consumption $\times$ Average Re-order period)

$$
=640-(50 \times 6)=640-300=340 \text { units }
$$

Maximum Stock Level $=$ Re-order Level + Re-order Quantity $-($ Minimum Consumption $\times$ Minimum Reorder period)
$\Rightarrow \quad 460=640-(20 \times 4)+$ Re - order quantity
$\Rightarrow 460=640-80+$ Re-order quantity
$=460-560+$ Re-order quantity
Re-order quantity $=460-560=-100$ Units (It is wrong because Re-order quantity never in negative)

## Working Note:-

Average Stock $=($ Minimum Stock Level + Maximum Stock Level $) / 2$
$\Rightarrow \quad 400=(340+$ Maximum Stock Level $) / 2$
$\Rightarrow 800=340+$ Maximum Stock Level
Maximum Stock Level $=800-340=460$ units

## Alternative Solution:-

Re-order Level $=$ Maximum Consumption $\times$ Maximum Re-order Period

$$
=80 \times 8=640 \text { units }
$$

Minimum Stock Level $=$ Re-order Level - (Average Consumption $\times$ Average Re-order Period)

$$
=640-(50 \times 6)=640-300=340 \text { units }
$$

Average Stock Level $=$ Minimum Stock Level $+\frac{1}{2} \times$ Re-order Quantity

$$
\Rightarrow 60=\frac{1}{2} \times \text { Re-order Quantity }
$$

Re-order Quantity $=60 \times 2=120$ units

## Q. 20

About 50 items of Materials are required every day in a company. A fixed cost of Rs. 50 per order is incurred for placing an order. The inventory carrying cost per item amounts to Rs. 0.02 per day. The lead period is 32 days.

## Compute:

(i) Economic order quantity
(ii) Re-order level.

## B.Com (H) 2014 External [10 Marks]

[E.O.Q. = 500 units; Re-order level $=1,600$ units]

## Q. 21

A company manufactures 5,000 units of a product per month. The purchase price of raw Materials is Rs. 20 per kg. The re- order period is 4 to 8 weeks. The consumption of raw Materials varies from 200 kg . to 600 kg per week. The cost of placing an order is Rs. 100 . The carrying cost of inventory is $20 \%$ per annum. You are required to calculate:
(i) Re - order Quantity;
(ii) Re-order Level (assume 50weeks in a year)

## B.Com (P) 2013 (Regular) [7 Marks]

## [E.O.Q. = 1,000 Kg; Re-order level = 4,800 Kg]

## Q. 22

A company manufactures products having a monthly demand of 2,000 units. For one unit of finished products 2 kgs of a particulars raw materials items is needed. The purchase price of the Materials is Rs. 20 per kg. The ordering cost is Rs. 120 per order and the holding cost is $\mathbf{1 0 \%}$ per annum. Calculate;
(i) Economic order quantity (EOQ) and
(ii) Annual cost of purchasing and storage of the raw materials at that quantity.

## B.Com (H) 2004

$\mathbf{E O Q}=\sqrt{\frac{2 \times U \times P}{S}}$
U = Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S=$ Cost of storing one unit for a year
$\mathrm{EOQ}=\sqrt{\frac{2 \times 48,000 \times 120}{2}}=2,400 \mathrm{Kg}$
Annual Cost $=$ Cost of purchasing + Cost of storage

$$
=\left(\frac{48,000}{2,400} \times 120\right)+\left(\frac{1}{2} \times 2,400 \times 2\right)=2,400+2,400=\text { Rs. } 4,800
$$

Q. 23

A company manufactures 5,000 units of a product per month. Cost of placing an order is Rs. 100. The purchase price of raw materials is Rs. 10 per kg . The order period is 4 to 8 weeks. The consumption of raw materials varies from 100 kg to 450 kg per week. The average consumption being 275 kg , the carrying cost of inventory is $\mathbf{2 0 \%}$ per annum. You are required to calculate:
(i) Reorder Quantity
(ii) Maximum Level
(iii) Minimum Level and
(iv) Average Level

## Q. 24

## Type 3:- E.O.Q. at Quantity Discount

## Q. 25

A firm is able to obtain quantity discounts on its orders of materials as follows:

| Price per tonne | Tonnes | Price | Tonnes |
| :--- | :--- | :---: | :---: |
| Rs. 6.00 | Less than 250 | Rs. 5.70 | 2,000 and less than 4,000 |
| Rs. 5.90 | $\mathbf{2 5 0}$ and less then 800 | Rs. 5.60 | 4,000 and over |
| Rs. 5.80 | $\mathbf{8 0 0}$ and less than 2,000 |  |  |

The annual demand for the materials is $\mathbf{4 , 0 0 0}$ tonnes. Stock holding costs are $20 \%$ of materials cost per annum. The delivery cost per order is Rs.6.
You are required to calculate the best quantity to order.

## C.A. Inter November 1990 Adapted

Table showing best order quantity

| Ordering quantity | Price per tonnes | No. of Order | Cost of purchase (Rs.) | Annual Carrying Cost $\frac{1}{2} \times$ order Quantity $\times$ carrying cost $p$.u.p.a. (Rs.) | Ordering Cost (Rs.) | Total Cost <br> (Rs.) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 200 | 6 | 20 | $\begin{aligned} & 4,000 \times 6 \\ & =24,000 \end{aligned}$ | $\frac{1}{2} \times 200 \times(6 \times 20 \%)=120$ | $20 \times 6=120$ | 24,240.00 |
| 250 | 5.9 | 16 | $\begin{gathered} 4,000 \times 5.9 \\ =23,600 \\ \hline \end{gathered}$ | $\begin{gathered} \frac{1}{2} \times 250 \times(5.9 \times 20 \%) \\ =147.50 \end{gathered}$ | $16 \times 6=96$ | 23,843.50 |
| 800 | 5.8 | 5 | $\begin{gathered} 4,000 \times 5.8 \\ =23,200 \end{gathered}$ | $\begin{aligned} \frac{1}{2} \times 800 & \times(5.8 \times 20 \%) \\ & =464 \end{aligned}$ | $5 \times 6=30$ | 23,694.00 |
| 2,000 | 5.7 | 2 | $\begin{gathered} 4,000 \times 5.7 \\ =22,800 \\ \hline \end{gathered}$ | $\begin{gathered} \frac{1}{2} \times 2,000 \times(5.7 \times 20 \%) \\ =1,140 \end{gathered}$ | $2 \times 6=12$ | 23,952.00 |
| 4,000 | 5.6 | 1 | $\begin{gathered} 4,000 \times 5.6 \\ =22,400 \end{gathered}$ | $\begin{gathered} \frac{1}{2} \times 4,000 \times(5.6 \times 20 \%) \\ =2,240 \end{gathered}$ | $1 \times 6=6$ | 24,646.00 |

The above table shows that least cost is Rs. $\mathbf{2 3 , 6 9 4}$ when the ordering quantity is $\mathbf{8 0 0}$ units. Hence, it is the optimum ordering quantity.

## Q. 26

YPS Ltd. has received an offer of quantity discount on its order of materials as under:

Price per tonne
Rs.
1,200
1,180
1,160
1,140
1,120

Tonnes
Nos.
less than 500
500 and less than 1,000
1,000 and less than 2,000
2,000 and less than 3,000
3,000 and above

The annual requirement for the materials is 5,000 tonnes. The ordering cost per order is Rs. 1,200 and the carrying cost is estimated at $20 \%$ per annum.

You are required to compute the most economical order quantity presenting the relevant information in a tabular form.
B.Com (H) 2001

Calculation of Economic order quantity (EOQ)

| Size if order <br> (Tonnes) | Price per <br> tonne | Purchase of 5,000 tonnes | Ordering <br> cost | Carrying <br> cost | Total <br> cost |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 400 | $\mathbf{1 , 2 0 0}$ | $\mathbf{6 0 , 0 0 , 0 0 0}$ | $\mathbf{1 5 , 0 0 0}$ | $\mathbf{4 8 , 0 0 0}$ | $\mathbf{6 0 , 6 3 , 0 0 0}$ |
| 500 | $\mathbf{1 , 1 8 0}$ | $59,00,000$ | 12,000 | 59,000 | $59,71,000$ |
| $\mathbf{1 , 0 0 0}$ | $\mathbf{1 , 1 6 0}$ | $58,00,000$ | 6,000 | $\mathbf{1 , 1 6 , 0 0 0}$ | $59,22,000$ |
| 2,000 | $\mathbf{1 , 1 4 0}$ | $57,00,000$ | 3,000 | $\mathbf{2 , 2 8 , 0 0 0}$ | $59,31,000$ |
| 3,000 | $\mathbf{1 , 1 2 0}$ | $56,00,000$ | $\mathbf{2 , 0 0 0}$ | $\mathbf{3 , 3 6 , 0 0 0}$ | $\mathbf{5 9 , 3 8 , 0 0 0}$ |

Conclusion: When order size is $\mathbf{1 , 0 0 0}$ tonnes, cost is least at Rs. $\mathbf{5 9 , 2 2 , 0 0 0}$. Thus EOQ is $\mathbf{1 , 0 0 0}$ tonnes.

## Q. 27

Annual requirement of a particular item of inventory is $\mathbf{1 0 , 0 0 0}$ units. Inventory carrying cost per unit per year is $20 \%$ and ordering cost is Rs. 40 per order. The price quoted by the supplier is Rs. 4 per unit. However the supplier is ready to give a discount of $5 \%$ for orders of $\mathbf{1 , 5 0 0}$ unit or more. Is it worthwhile to avail of the discount offer?

## B.Com (H) 2006 Regular [6 Marks]

(a) $\mathrm{EOQ}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathbf{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
$S$ = Cost of storing one unit for a year
$\mathrm{EOQ}=\sqrt{\frac{2 \times 10,000 \times 40}{0.8}}=1,000$ units
(i) When order is for EOQ of 1,000 unit , total cost will be:

Materials Cost (10,000 units @ Rs. 4) 40,000
Ordering Cost ( $\mathbf{1 0 , 0 0 0 / 1 , 0 0 0 \times \text { Rs. 40) }}$
400
Storage cost ( $1000 \times 1 / 2 \times 4 \times 20 \%$ )
$\begin{array}{r}400 \\ \hline 40,800\end{array}$
(ii) When ordering quantity is 1,500 unit at $5 \%$ discount on price

Materials cost (10,000 units @ Rs. 3.80) 38,000
Ordering cost (10,000/1,500 $\times$ Rs. 40) 267
$\begin{array}{lr}\begin{array}{l}\text { Storage cost }(1500 \times 1 / 2 \times \text { Rs. } 3.80 \times 20 \%) \\ \text { Total cost }\end{array} & \frac{570}{38,837}\end{array}$

It is cheaper to buy quantities of 1,500 unit at $5 \%$ discount. Therefore offer of discount should be availed.

## Q. 28

A company manufactures a special product, which requires a component 'Alpha'. The following particulars are available for 2014:

| Annual Demand | 8,000 units |
| :--- | :--- |
| Cost of placing an order | Rs. 200 per order |
| Cost per unit of 'Alpha' | Rs. 400 |
| Carrying cost \% p.a. | $\mathbf{2 0 \%}$ |

The company has been offered a discount of $4 \%$ on the purchase of 'Alpha' provided the order size is 4,000 components at a time.

## Required:

(i) Calculate Economic Order quantity.
(ii) Advise whether the discount offer can be accepted.

## B.Com (H) 2013 Regular [8 Marks]

[(i) 200 units (ii) No
(Total Cost without discount Rs. 32,16,000 or Total Cost with discount Rs. 32,26,000]

## Q. 29

ABC Co. buys in lots of 125 boxes which is a three month's supply The cost per box is Rs. 125 and the ordering cost Rs. 250 per order. The inventory carrying cost is estimated at $20 \%$ of unit value per annum. You are required to ascertain.
(i) The total annual cost of existing inventory policy
(ii) How much money would be saved by employing the economic order quantity?
B.Com (H) 2008 [5 Marks] / 2013
$\mathrm{EOQ}=\sqrt{\frac{2 \times U \times P}{S}}$
$\mathbf{U}=$ Annual Usage or Consumption
$\mathbf{P}=$ Cost of placing an order
S = Cost of storing one unit for a year

$$
E O Q=\sqrt{\frac{2 \times 500 \times 250}{25}}=100 \text { units }
$$

Total Cost per annum $=(125 \times 500)+\left(\frac{100}{2} \times 125 \times 20 \%\right)+(5 \times 250)$

$$
=62,500+1,250+1,250=\text { Rs. } 65,000
$$

Existing Annual Cost $=(125 \times 4 \times 125)+(250 \times 4)+(125 / 2 \times 125 \times 20 \%)$

$$
=62,500+1,000+1,562.50=\text { Rs. } 65,062.50
$$

Money Saved by EOQ = Rs. 65,062.50 - Rs. 65,000 = Rs. 62.50

## Q. 30

JP Ltd. manufacturers of a special products, follows the policy of EOQ (Economic order quantity) for one its companies. The component's details as follows:

| Particulars | Rs. |
| :--- | :---: |
| Purchase price per components | 200 |
| Cost of an order | 100 |
| Annual cost of carrying one unit in inventory | $\mathbf{1 0 \%}$ of purchase price |
| Total cost of inventory and ordering per annum | 4,000 |

The company has been offered a discount of $\mathbf{2 \%}$ on the price of the component provided the lot size is $\mathbf{2 , 0 0 0}$ components at a time.

## You are required to:

(a) Compute the EOQ
(b) Advise whether the quantity discount offer can be accepted.
(Assume that the inventory carrying cost does not very according to discount policy)
(c) Would your advice differ if the company is offered 5\% discount on a single order?

CA Inter November 1994
(a) Computation of EOQ.

Basic Calculations:
(i) Purchase per components Rs. 200
(ii) Cost of an order(P)
(iii) Annual cost of carrying one unit of inventory is (s)
(iv) Total cost of (carrying) inventory and ordering per annum

Rs. 100
(v) Let the total annual usage be $U$

10\% of cost of Rs. 20
Rs. 4,000

In order to compute EOQ by using the above data we require the figure of total annual usage of inventory. This can be done through the following equation
Total Cost of Inventory Ordering and Carrying $=\sqrt{2 \times U \times P \times S}$
$\Rightarrow$ Rs. $4,000=\sqrt{2 \times U \times 100 \times 20}$
$\Rightarrow$ Rs. $4,000=\sqrt{4,000 U}$
$\Rightarrow 4,000 \mathrm{U}=1,60,00,000$
$\mathrm{U}=4,000$ units
Thus, annual consumption is $\mathbf{4 , 0 0 0}$ units

EOQ $=\sqrt{\frac{2 \times U \times P}{S}}=\sqrt{\frac{2 \times 4,000 \times 100}{20}}=200$ units
(b) No of order $=\mathbf{2}$ (When order size is 2,000)

If a discount of $\mathbf{2 \%}$ on the price of the components is available if an order in the lot size of $\mathbf{2 , 0 0 0}$ components is given, the cost shall be:

Ordering Cost ( $2 \times 100$ )
Add: Storage Cost (1,000 $\times 20$ )
Less: Saving on account of discount Net Cost

Rs. 200
Rs. 20,000
Rs.20, 200
Rs. 16,000
Rs. 4,200

Since the net cost of Rs. 4,200 is higher than the present cost of Rs. 4,000, this offer should not be accepted.
(c) If a discount of $5 \%$ on the price of the component is offered if the a single order of $\mathbf{4 , 0 0 0}$ components is placed, the total cost shall be:
Ordering cost ( $1 \times 100$ )
Add: Storage cost $(2,000 \times 20)$
Less: Saving on account of discount $(5 \times 4,000 \times 20)$
Net Cost
Rs. 100
Rs. 40,000
Rs. 40,100
Rs. 40,000
Rs. 100

Since the Net Cost is much less than the present cost of Rs. 4,000, this offer must be accepted.

## Type 4:- LIFO \& FIFO

## Q. 31

## 10

From the following information prepare stores ledger account as per FIFO method.

```

|  | Jan.25 | 500 | 1.10 | 550 |  |  | 300 | 1.25 | 375 |
|  |  |  |  |  |  |  | 500 | 1.10 | 550 |
| Jan.26 |  |  |  |  | 100 | 1.15 | 115 | 20 | 1.25 |
|  |  |  |  | 280 | 1.25 | 350 | 500 | 1.10 | 550 |

## Q. 34

From the following information prepare stores ledger card under LIFO and FIFO system. Calculate the value of closing Stock under both the system:

| January 1 | Opening Stock | 200 pieces | @Rs. 2.00 each |
| :---: | :--- | :--- | :--- |
| 5 | Purchase | 100 pieces | @ Rs. 2.20 each |
| 10 | Purchase | 150 pieces | @ Rs. 2.40 each |
| 20 | Purchase | 120 pieces | $@$ Rs. 2.50 each |
| 22 | Issue | 150 pieces |  |
| 25 | Issue | 100 pieces |  |
| 27 | Issue | 100 pieces |  |
| 28 | Issue | 200 pieces |  |

## B.Com (P) 2006 (External) [10 Marks]

## Store Ledger Card (LIFO)

| Date | Receipt |  |  | Issues |  |  | Balance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Qty. | Rate | Amt. | Qty. | Rate | Amt. | Qty. | Rate | Amt. |
| Jan. 1 |  |  |  |  |  |  | 200 | 2.00 | 400 |
| Jan. 5 | 100 | 2.20 | 220 |  |  |  | $\left\{\begin{array}{l}200 \\ 100\end{array}\right.$ | $\begin{aligned} & \hline 2.00 \\ & 2.20 \\ & \hline \end{aligned}$ | $\begin{aligned} & 400 \\ & 220 \\ & \hline \end{aligned}$ |

## FIFO \& LIFO \& Simple Average

## Q. 35

From the following details in respect of a materials item for the month of December 2014, calculate cost of materials consumed and the value of closing Stock under (I) LIFO and (II) Simple average price method.

December 2014
Opening Stock ( $1^{\text {st }}$ December) 500 unit @ Rs. 2 per unit Purchase:
$5^{\text {th }}$ December 1000 unit @ Rs. 3 per unit
$8^{\text {th }}$ December 1500 unit @ Rs. 4 per unit Issued production:
$10^{\text {th }}$ December

1,600 unit
B.Com (P) 2006 (External) [8 Marks]

## LIFO Method

| Date | Receipt |  |  | Issues |  |  | Balance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Qty. | Rate | Amt. | Qty. | Rate | Amt. | Qty. | Rate | Amt. |
| Dec.1 | - | - | - | - | - | - | 500 | 2 | 1,000 |
| Dec. 5 | 1,000 | 3 | 3,000 |  |  |  | 500 | 2 | 1,000 |
|  |  |  |  |  |  |  | 1,000 | 3 | 3,000 |
| Dec. 8 | 1,500 | 4 | 6,000 |  |  |  | 500 | 2 | 1,000 |
|  |  |  |  |  |  |  | 1,000 | 3 | 3,000 |
|  |  |  |  |  |  |  | 1,500 | 4 | 6,000 |
| Dec. 10 |  |  |  | 1,500 | 4 | 6,000 | 500 | 2 | 1,000 |
|  |  |  |  | 100 | 3 | 300 | 900 | 3 | 2,700 |

Cost of Materials Consumed = Rs. 6,300
Value of Closing Stock (1,400 units) $=$ Rs. 3,700
Simple Average Method

| Date | Receipt |  |  | Issues |  |  | Balance |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Qty. | Rate | Amt. | Qty. | Rate | Amt. | Qty. | Amt. |
| Dec. 1 | - | - | - | - | - | - | 500 | 1,000 |
| Dec. 5 | 1,000 | 3 | 3,000 |  |  |  | 1,500 | 4,000 |
| Dec. 8 | 1,500 | 4 | 6,000 |  |  |  | 3,000 | 10,000 |
| Dec.10 | - |  |  | 1,600 | 3 | 4,800 | 1,400 | 5,200 |

Working Note: - Average Rate $=\frac{2+3+4}{3}=$ Rs. 3
Value of Closing Stock (1,400 units) = Rs. 5,200

## Q. 36

From the following information, prepare store ledger account as per Simple average price method;

| January 1, 2013 | Opening Stock | 500 units | @ Rs. 20 per unit |
| :--- | :---: | :---: | :--- |
| January 4, 2013 | Received | $\mathbf{4 0 0}$ units | @ Rs. 21 per unit |
| January 6, 2013 | Issued | $\mathbf{6 0 0}$ units |  |
| January 8, 2013 | Received | $\mathbf{8 0 0}$ units | @ Rs. 24 per unit |
| January 9, 2013 | Issued | 500 units |  |
| January 13, 2013 | Issued | 300 units |  |
| January 24, 2013 | Purchased | 500 units | @ Rs. 25 per unit |
| January 28, 2013 | Issued | $\mathbf{4 0 0}$ unit |  |

## Solution:-

> Simple Average Method

| Date | Receipt |  |  | Issues |  |  | Balance |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Qty. | Rate | Amt. | Qty. | Rate | Amt. | Qty. | Amt. |
| Jan. 1 | - | - | - | - | - | - | 500 | 10,000 |
| Jan. 4 | 400 | 21 | 8,400 | - | - | - | 900 | 18,400 |
| Jan. 6 | - | - | - | 600 | 20.50 | 12,300 | 300 | 6,100 |
| Jan. 8 | 800 | 24 | 19,200 | - | - | - | 1,100 | 25,300 |
| Jan. 9 | - | - | - | 500 | 22.50 | 11,250 | 600 | 14,050 |
| Jan. 13 | - | - | - | 300 | 24.00 | 7,200 | 300 | 6,850 |
| Jan. 24 | 500 | 25 | 12,500 | - | - | - | 800 | 19,350 |
| Jan. 28 | - | - | - | 400 | 24.50 | 9,800 | 400 | 9,550 |

## Q. 37

From the following information, prepare store ledger account as per Simple average price method;

| 2010 |  | Units | Price per unit(Rs.) |
| :---: | :--- | :---: | :---: |
| Jan. 2 | Purchased | $\mathbf{4 , 0 0 0}$ | 4.00 |
| Jan. 20 | Purchased | $\mathbf{5 0 0}$ | $\mathbf{5 . 0 0}$ |
| Feb. 5 | Issued | $\mathbf{2 , 0 0 0}$ | $\mathbf{6 . 0 0}$ |
| Feb.10 | Purchased | $\mathbf{4 , 0 0 0}$ |  |
| Feb.12 | Issued | $\mathbf{1 , 0 0 0}$ |  |
| March 2 | Issued | $\mathbf{2 , 0 0 0}$ |  |
| March 5 | Issued | $\mathbf{4 , 5 0 0}$ | $\mathbf{5 . 5 0}$ |
| March 15 | Purchased | $\mathbf{3 , 0 0 0}$ |  |
| March 20 | Issued |  |  |

Hints: Feb 5 @ Rs.4.5; Feb 12 @ Rs.5; March 2 \& 5 @ Rs.6; March 20 @ 5.75

## FIFO \& LIFO \& Weighted Average

## Q. 38

The following transaction took place in respect of a materials item:

|  | Receipt quantity | Rate (Rs.) | Issue quantity |
| :--- | :---: | :---: | :---: |
| March 2 | 200 units | 2.00 | - |
| March 10 | 300 units | 2.40 | - |
| March 15 | - | - | 250 units |
| March 18 | 250 units | -2.60 | 200 units |
| March 20 | - | - |  |

Prepare a stores ledger sheet using:
(i) LIFO Method
(ii) Weighted Average Method

## B.Com (P) 2010 (Regular) [6 Marks]

Store Ledger Account by
LIFO Method

| Date | Receipt |  |  | Issues |  |  | Balance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Qty. | Rate | Amt. | Qty. | Rate | Amt. | Qty. | Rate | Amt. |
| March <br> 2 | 200 | 2.00 | 400 | - | - | - | 200 | 2.00 | 400 |
| 10 | 300 | 2.40 | 720 | - | - | - | 200 | 2.00 | 400 |
|  |  |  |  |  |  |  |  |  |  |
| 15 | - | - | - | 250 | 2.40 | 600 | 200 | 2.00 | 400 |
|  |  |  |  |  |  |  | 50 | 2.40 | 120 |
| 18 | 250 | 2.60 | 650 | - | - | - | 200 | 2.00 | 400 |
|  |  |  |  |  |  |  | 50 | 2.40 | 120 |
|  |  |  |  |  |  |  |  | 250 | 2.60 |
| 650 |  |  |  |  |  |  |  |  |  |
| 20 | - | - | - |  | 2.60 | 520 | 200 | 2.00 | 400 |
|  |  |  |  |  |  |  | 50 | 2.40 | 120 |
|  |  |  |  |  |  |  | 30 |  | 2.60 |
|  |  |  |  |  |  |  |  |  |  |

Store Ledger Account by
Weighted Average Method

| Date | Receipt |  |  | Issues |  |  | Balance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Qty. | Rate | Amt. | Qty. | Rate | Amt. | Qty. | Rate | Amt. |
| March | 200 | 2.00 | 400 | - | - | - | 200 | 2.00 | 400 |
| 10 | 300 | 2.40 | 720 | - | - | - | 500 | 2.24 | 1120 |
| 15 | - | - | - | 250 | 2.24 | 560 | 250 | 2.24 | 560 |
| 18 | 250 | 2.60 | 650 | - | - | - | 500 | 2.42 | 1210 |
| 20 | - | - | - | 200 | 2.42 | 484 | 300 | 2.42 | 726 |

## Q. 39

Show how the times given ahead relating to purchase and issue of a raw materials will appear in the stores ledger using LIFO, FIFO and Weighted Average Method of pricing the Materials issue.

| 2010 |  | Units | Price per unit(Rs.) |
| :---: | :--- | :---: | :---: |
| Feb.1 | Opening balance | 300 | 20 |
| Feb. 5 | Purchase | 200 | 22 |
| Feb.11 | Issue | 150 | $?$ |
| Feb.22 | Purchase | 200 | 23 |
| Feb.24 | Issue | 150 | $?$ |
| Feb.28 | Issue | 200 | $?$ |
|  | Shortage | 5 | $?$ |

## B.Com (H) 2010 [15Marks]

[LIFO Rs.3,900 ; FIFO Rs. 4,485; Weighted Average Method Rs. 4,212]

## Q. 40

Oil India is a Bulk Distributor of oil. A periodic inventory of oil on hand is taken when the books are closed at the end of each month. The following summary of information is available for the month of December.

Sales Rs. 9,45,000
General Administrative Cost Rs. 25,000
Opening Stock 1,00,000 liters @ Rs. 3 per litre; Rs. 3,00,000 purchases (including freight in)
December 1, 2,00,000 liters @ Rs. 2.85 per liter
December 30, 1,00,000 liters @ Rs. 3.03 per liter
Closing Stock December 31, 1,30,000 liters
Compute the following by the First in First Out, Weighted average and Last in First out Method of inventory costing.
a) Value of Inventory on December 31
b) Amount of Cost of Goods Sold for December
c) Profit or Loss for December

## B.Com (H) 2007 Regular [11 Marks]

## First in First Out (FIFO) Method

(a) Closing inventory on December 31

| $\mathbf{1 , 0 0 , 0 0 0}$ liters @ Rs. 3.03 | $\mathbf{3 , 0 3 , 0 0 0}$ |
| :--- | ---: |
| $\mathbf{3 0 , 0 0 0}$ liters @ Rs. 2.85 | $\underline{85,500}$ |
| Closing Stock (value of inventory) | $\mathbf{3 , 8 8 , 5 0 0}$ |

(b) Cost of goods sold Opening Stock

3,00,000
Add: Purchase December 1 ( 2,00,000 @ Rs. 2.85)
5,70,000
Add: Purchase December 30 (1,00,000 liters @ Rs. 3.03 per liter) $\frac{3,03,000}{11,73,000}$
Less: Closing Stock (value of inventory)
$\begin{array}{r}\mathbf{3 , 8 8 , 5 0 0} \\ \hline 7,84,000\end{array}$
(c) Calculation of profit

Cost of goods sold
7,84,500
Add: General Administrative Cost
Total Cost
$\frac{25,000}{8,09,500}$
Sales
Profit (Sales - Total Cost)
$\frac{\mathbf{9 , 4 5 , 0 0 0}}{\mathbf{1 , 3 5 , 5 0 0}}$

## Weighted Average Method

$\begin{array}{ll}\text { Closing Stock valuation } & \mathbf{3 , 9 0 , 0 0 0} \\ \mathbf{1 , 3 0 , 0 0 0} \text { liters @ Rs. } 3 & \end{array}$
The rate of Rs. 3 is calculated as follows:
On first Receipt $=\frac{(1,00,000 \times 3)+(2,00,000 \times 2.85}{1,00,000+2,00,000}=\frac{\mathbf{8 , 7 0 , 0 0 0}}{3,00,000}=$ Rs. 2.90
Last Receipt $=\frac{(\mathbf{3 0 , 0 0 0} \times 2.95)+(\mathbf{1 , 0 0 , 0 0 0} \times 3.03}{1,00,000+2,00,000}=\frac{3,90,000}{1,30,000}=$ Rs. 3.00
Cost of Goods sold (Purchase Cost + Opening Stock) 11,73,000
Less: Closing Stock $\underline{(390,000)}$

Cost of Goods sold $\quad$| $7,83,000$ |
| :--- |

Add: General Administrative Cost $\quad \mathbf{2 5 , 0 0 0}$
Total sale $\quad \mathbf{8 , 0 8 , 0 0 0}$
Sales $\quad 9,45,000$
Profit
1,37,000

## Last in First Out Method

| Particulars | Rs. |
| :--- | :---: |
| 30,000 Liters @ Rs. $\mathbf{3}$ | $\mathbf{9 0 , 0 0 0}$ |
| $\mathbf{1 , 0 0 , 0 0 0}$ Liters @ Rs. 3.03 | $\mathbf{3 , 0 3 , 0 0 0}$ |
| Value of Closing Stock | $\mathbf{3 , 9 3 , 0 0 0}$ |
| Value of Purchase + Opening Stock | $\mathbf{1 1 , 7 3 , 0 0 0}$ |
| Less: Closing Stock | $\mathbf{( 3 , 9 3 , 0 0 0}$ |
| Cost of Goods Sold | $\mathbf{7 8 0 , 0 0 0}$ |
| Add: General Administrative Cost | $\mathbf{2 5 , 0 0 0}$ |
| Total Cost | $\mathbf{8 , 0 5 , 0 0 0}$ |
| Sales | $\mathbf{9 , 4 5 , 0 0 0}$ |
| Profit | $\mathbf{1 , 4 0 , 0 0 0}$ |

## Type 5:- Mics. Questions

## Q. 41

A Consignment consisting of 4 grades of materials was purchased for Rs. 1,20,000. Storekeeper sorted them out an recorded the following:
Grade A-4,000 Units
Grade B-8,000 Units
Grade C- 10,000 Units
Grade D-12,000 Units
Total sales of grade A amounted to Rs. 16,000 (rate of profit being $33 \frac{1}{\mathbf{3}} \%$ of cost) and those of $B$ at price 1 $\frac{1}{2}$ time that of $A$, but the rate of profit was $33 \frac{1}{3} \%$ of sales. Similarly, Grade C Materials was sold for Rs. 50,000 , yielding a profit of $\mathbf{2 0 \%}$ of sales.
Calculate the purchase price of each grade on the basis of the above information.

## B.Com (P) 2004 (Supply) [5 Marks]

| Particulars |  | Rs. |
| :---: | :---: | :---: |
| Grade A |  |  |
| Cost of Grade A sales |  | 16,000 |
| Less: Profit ( $33 \frac{1}{3} \%$ on cost or $\mathbf{2 5 \%}$ on sales) |  | 4,000 |
|  |  | 12,000 |
| Total cost of A |  |  |
| Cost price per unit of $A=\frac{12,000}{4,000}=$ Rs. 3 per unit |  |  |
| Selling price per unit of $A=\frac{16,000}{4,000}=$ Rs. 4 per unit |  |  |
| Grade B |  |  |
| Selling price per unit Rs. 6 |  |  |
| Less: Profit ( $33 \frac{1}{3} \%$ on sales) $\quad$ Rs. 2 |  |  |
| Cost per unit of B Rs. 4 |  |  |
| Total cost of B 8,000 $\times 4$ |  | 32,000 |
| Grade C |  |  |
| Total Sales Rs. 50,000 |  |  |
| Less: Profit ( $20 \%$ on sales) $\quad \frac{\text { Rs. } 10,000}{\text { Rs. 40,000 }}$ |  |  |
| Total Cost |  | 40,000 |
| Cost per unit $\quad \frac{40,000}{10,000}=$ Rs. 4 per unit |  |  |
| Grade D | 1,20,000 |  |
| $\begin{array}{lll}\text { Less: Total Cost of } & \text { A } & \text { Rs. } 12,000 \\ & \text { B } & \text { Rs. } 32,000 \\ & \text { C } & \text { Rs. } 40,000\end{array}$ |  |  |
|  | 84,000 |  |
|  | 36,000 |  |
| Cost per unit $=\frac{36,000}{12,000}=$ Rs. 3 per unit | 36,000 |  |

Thus, cost details are -

| Grade of Materials | Units | Per unit | Total |
| :---: | :---: | :---: | :---: |
| A | $\mathbf{4 , 0 0 0}$ | 3 | $\mathbf{1 2 , 0 0 0}$ |
| B | $\mathbf{8 , 0 0 0}$ | 4 | $\mathbf{3 2 , 0 0 0}$ |
| C | $\mathbf{1 0 , 0 0 0}$ | $\mathbf{4}$ | $\mathbf{4 0 , 0 0}$ |
| D | $\mathbf{1 2 , 0 0 0}$ | 3 | $\mathbf{3 6 , 0 0 0}$ |
|  |  |  | $\mathbf{1 , 2 0 , 0 0 0}$ |

## Q. 42

4,000 lbs. of wool costing Rs. 72,000 was issued for the manufactures of 36 " size pullover. On the completion of manufactures of pullovers, the following information furnished:
(i) 1,600 good pullovers 36 " size of $\mathbf{2} \mathbf{l b s}$. each were manufactured.
(ii) 100 lbs . of wool in scrapped and realised Rs. 700.
(iii) 200 lbs. of off cuts were used for the manufactures of another product of hosiery. The market value of this is Rs. 1,800 .
(iv) 200 pullovers were found defective and were rectified at an additional materials cost of Rs. 500.

You are required to find out the cost of materials of one pullover.

$$
\text { B.Com (P) } 2005 \text { (Regular) [7 Marks] }
$$

| Particulars | Rs. |
| :--- | :---: |
| Cost of Materials Issued | $\mathbf{7 2 , 0 0 0}$ |
| Less: Sale of Scrap | $\mathbf{7 0 0}$ |
|  | $\mathbf{7 1 , 3 0 0}$ |
| Less: Off cut for the manufacture of another product (Spoilage) | $\mathbf{1 , 8 0 0}$ |
|  | $\mathbf{6 9 , 5 0 0}$ |
| Add: Cost of rectification of 200 defective Pullover | 500 |
| Cost of 1,800 (Good 1,600 + 200 defective) Pullover of 2 lbs. each | $\mathbf{7 0 , 0 0 0}$ |

Cost of Materials per Pullover $=$ Rs. 70,000 / 1,800 $=$ Rs. 38.89

## Q. 43

A furniture manufacturer purchased 10,000 cft. Of timber logs on $1^{\text {st }}$ October $2014 @$ Rs. 10 per cft. and stored them in his timber yard for six months for seasoning. In this timber yard the following items of expenses were incurred during the period of seasoning:
(i) Rent of the yard ( $\mathbf{2 , 0 0 0}$ sq. ft. ) Rs. 250 per month.
(ii) Salaries of 2 watchmen and khalasis @ Rs. 250 per month each.
(iii) Incidental expenses of maintenance, lighting etc. @ $\mathbf{1 5 0}$ per month.
(iv) Annual shares of general overheads expenses of the business Rs.2,000.
(v) Insurance charges for the logs to be seasoned @ $1 \%$ on the value of unseasoned logs for the period of seasoning $-50 \%$ of floor area of the yard had been set apart for seasoning timer and the remaining floor area is occupied by shops making furniture.
Loss in volume of logs due to seasoning: $10 \%$. Calculate the price to be charged on issue of the seasoned logs per cft. to the nearest rupee.

| Particulars | Quantity | Rs. |
| :--- | :---: | :---: |
| Cost of timber | $\mathbf{1 0 , 0 0 0}$ | $\mathbf{1 , 0 0 , 0 0 0}$ |
| Rent (1/2 shares) |  | 750 |
| Salaries of watchmen etc. (1/2 shares) |  | $\mathbf{1 , 5 0 0}$ |
| Incidental expenses (1/2 shares) |  | $\mathbf{4 5 0}$ |
| Overheads expenses (1/2 shares) |  | 500 |
| Insurance | $\mathbf{1 , 0 0 0}$ | $\mathbf{1 , 0 0 0}$ |
| Loss in volume (10\%) | $\mathbf{9 , 0 0 0}$ | $\mathbf{1 , 0 4 , 2 0 0}$ |
| Total Cost |  |  |

Cost per cft. $=\frac{\mathbf{1 , 0 4 , 2 0 0}}{9,000}=$ Rs. 11.57

## Q. 44

A consignment consisted of two chemicals $A$ and $B$. The invoice gave the following data:

|  | Rs. |
| :--- | :---: |
| Chemical A ; 4 tonnes at Rs. 5 per kg | $\mathbf{2 0 , 0 0 0}$ |
| Chemical B ; 2 tonnes at Rs. 2 per kg | $\mathbf{4 , 0 0 0}$ |
| Sales Tax | $\mathbf{1 , 2 0 0}$ |
| Freight | $\mathbf{9 0 0}$ |
| Total | $\mathbf{2 6 , 1 0 0}$ |

A Shortage of 2 quintals in $A$ and 1 quintal in $B$ was noticed and it was considered normal. What rate per kg would you adopt for pricing issues assuming provision of $\mathbf{2 0 \%}$ towards further deterioration?

## B.Com (H) 2012 [10 Marks]

|  | Chemical A <br> $(\mathbf{K g})$ | Chemical B <br> $(\mathrm{Kg})$ |
| :--- | :---: | :---: |
| Quantity | $\mathbf{4 , 0 0 0}$ | $\mathbf{2 , 0 0 0}$ |
| Less: Shortage | $\mathbf{2 0 0}$ | $\mathbf{1 0 0}$ |
|  | $\mathbf{3 , 8 0 0}$ | $\mathbf{1 , 9 0 0}$ |
| Further deterioration (20\%) | $\mathbf{( 7 6 0 )}$ | $\mathbf{( 3 8 0 )}$ |
| Net quantity | $\mathbf{3 , 0 4 0}$ | $\mathbf{1 , 5 2 0}$ |

$\left.\begin{array}{|l|c|c|}\hline & \text { (Rs.) } & \text { (Rs.) } \\ \hline \text { Cost } & \mathbf{2 0 , 0 0 0} & \mathbf{4 , 0 0 0} \\ \hline \text { Sales Tax @ 5 \% } & \mathbf{1 , 0 0 0} & 200 \\ \hline \text { Freight (as per weight) } & \mathbf{6 0 0} & \mathbf{3 0 0} \\ \hline \text { Total } & \mathbf{2 1 , 6 0 0} & \mathbf{4 , 5 0 0} \\ \hline \text { Issue Rate Per Kg } & \frac{21,600}{3,040}=\text { Rs. } 7.10 & \underline{4,500} \\ \hline 1,520\end{array}\right)$ Rs. 2.96

## Q. 45

A factory use $\mathbf{4 0 0 0}$ varieties of inventory - In terms of inventory holding inventory usage the following information is complied.

| No. of varieties of inventory | $\%$ | \% value of inventory <br> holding <br> (Average) | \% of inventory usage <br> (in end products) |
| :---: | :---: | :---: | :---: |
| 3,875 | 96.875 | 20 | 5 |
| 110 | 2.750 | 30 | 10 |
| 15 | 0.375 | 50 | 85 |
| 4,000 | 100.000 | 100 | 100 |

Classify the item of inventory as per ABC analysis with reasons.

## B.Com (H) 2003

A Materials, 15 Items representing $50 \%$ of the total value and $\mathbf{8 5 \%}$ of consumption.
B Materials, 110 Items representing $\mathbf{3 0 \%}$ of the total value and $\mathbf{1 0 \%}$ usage in the end products.
C Materials, 3875 Items representing $\mathbf{2 0 \%}$ in value and $5 \%$ in usage in the end products.

## Q. 46

At what price per unit would part no. A 32 be entered in the Stores Ledger, if following invoice was received from a supplier;

| Invoice | Rs. |
| :--- | :---: |
| 200 units of Part No. A 32 @ Rs. 5 | 1,000 |
| Less: $20 \%$ Discount | 200 |
| Add: Excise duty @ 15\% | 800 |
| Add: Packing charges (5 non- returnable boxes) | 120 |
|  | 920 |
|  | 50 |

Notes:
(i) A $2 \%$ discount will be given for payment in 30 days
(ii) Documents substantiating payment of excise duty is enclosed for claiming MODVAT credit.

## CA Inter 1995 Nov.

Computation of Price to be entered in Stores Ledger
(of Part No. A 32)

|  | Rs. |
| :--- | :---: |
| Cost of 200 units less trade discount | $\mathbf{8 0 0}$ |
| Add: Packing Charges | 50 |
| Total | $\mathbf{8 5 0}$ |

Cost per unit = Rs.850/200units = Rs.4.25

## Q. 47

The following data are available in respect of materials $\mathbf{X}$ for the year ended $3{ }^{\text {st }}$ March 2014.

| Opening Stock | $\mathbf{9 0 , 0 0 0}$ |
| :--- | :--- |
| Purchase during the year | $2,70,000$ |
| Closing Stock | $\mathbf{1 , 1 0 , 0 0 0}$ |

Calculate:
(i) Inventory turnover ratio, and
(ii) The number of days for which the average inventory is held.

## B.Com (H) 2010 [6 Marks]

$$
\begin{aligned}
\text { Cost of Materials consumed } & =\text { Opening Stock }+ \text { Purchase }- \text { Closing Stock } \\
& =\mathbf{9 0 , 0 0 0}+2,70,000-\mathbf{1 , 1 0 , 0 0 0}=\text { Rs. } 2,50,000
\end{aligned}
$$

Average Stock $=\frac{90,000+1,10,000}{2}=1,00,000$
Inventory turnover ratio $=\frac{\text { Cost of Material Consumed }}{\text { Average Stock }}=\frac{2,50,000}{1,00,000}=2.5$ times
No. of days for which average inventory is held $=\frac{\mathbf{3 6 5} \text { days in the year }}{2.5 \text { times }}=146$ days

## Q. 48

From the following data for $\mathbf{2 0 1 4}$ you are required to calculate:
(i) Inventory turnover ratio of Materials A
(ii) The Average Stock holding of this Materials in terms of number of days

Opening Stock 1st April 2013
Purchase during the year
Closing Stock 31st March 2014

20,000
1,04,000
12,000

## B.Com (H) 2013 [7Marks]

Average inventory $=\frac{\text { Opening Stock }+ \text { Closing Stock }}{2}$

$$
=\frac{20,000+12,000}{2}=16,000 \text { units }
$$

Cost of Materials consumed $=(20,000+1,04,000)-12,000=$ Rs. $1,12,000$
Inventory turnover ratio $=\frac{\text { Cost of Material Consumed }}{\text { Average Stock }}=\frac{1,12,000}{16,000}=7$ times
Average Stock $=\frac{\text { No.of days in the year }}{\text { Inventory turnover ratio }}=\frac{365}{7}=52$ Days

## Q. 49

From the following particulars, work out the issue rate per 1,000 of first class and second class bricks:
(a) Paid for the supply at the kiln site for 30 lakh first class bricks @ Rs. 30 per $\mathbf{1 , 0 0 0}$ bricks.
(b) Paid for the supply at the kiln site for 60 lakh second class bricks @ Rs. 25 per 1,000 bricks.
(c) Paid carriage charges for carrying all bricks from kiln to Stock yard @ Rs. $\mathbf{1 . 5 0}$ per 1,000 bricks.
(d) Paid unloading charges Rs. 90 (lump sum)
(e) Paid for Stocking in Stock yard Rs. 180 (lump sum)
(f) Breakage in handling - $\mathbf{1 \%}$ for first class bricks and $\mathbf{2 \%}$ for second-class bricks.
I.C.W.A. Inter

|  | First Class bricks (Rs.) | Second Class bricks (Rs.) |
| :---: | :---: | :---: |
| Purchase Price <br> (a) 30 lakh bricks @ Rs. 30 per 1,000 bricks | 90,000 |  |
| (b) 60 lakh bricks @ Rs. 25 per 1,000 bricks |  | 1,50,000 |
| Carriage charges @ Rs. 1.5 per 1,000 bricks | 4,500 | 9,000 |
| Unloading charges Rs. 90 |  |  |
| Stocking charges Rs. 180 |  |  |
| Rs. 270 | 90 | 180 |
| Total Cost | 94,590 | 1,59,180 |

|  |  | First Class bricks | Second Class bricks |
| :---: | :---: | :---: | :---: |
| Total bricksLess: Breakage (1\% and 2\%) | Goods bricks | 30,00,000 | 60,00,000 |
|  |  | 30,000 | 1,20,000 |
|  |  | 29,70,000 | 58,80,000 |
| Issue Rate for 1,000 bricks |  | 31.85 | 27.07 |

## Q. 50

A company has the option to procure a particular material from two sources:
Source 1 assures that defective will not be more than $\mathbf{2} \%$ of supply of quantity.
Source 2 does not give any assurance, but on the basis of past experience of suppliers received from it, it is observed that defective percentage is $2.8 \%$.

The Materials is supplied in lots of $\mathbf{1 , 0 0 0}$ units. Source 2 supplies the lot of a price, which is lower by Rs. 100 as compared to source 1 . The defective units of materials can be rectified for use at a cost of Rs. 5 per unit.

You are required to find out which of the source is more economical.

## C.A. Inter

Comparative statement of procuring Materials from two sources

|  | Materials source 1 | Materials source 2 |
| :--- | :---: | :---: |
| Defective in \% | 2 | 2.8 |
|  | [ figure estimate] | [past experience] |
| Unit supplied [in one lot] | 1,000 | 1,000 |
| Total defective units in a lot | 20 | 28 |
| Additional price paid per lot[Rs.] A | $[1,000$ unit $\times 2 \%$ ] | [1,000units $\times 2.8 \%$ ] |
| Rectification cost of defect [Rs.] B | 100 | - |
|  | 100 | 140 |
| Total additional cost per lot [Rs.] A+B | [ 20 unit $\times$ Rs. 5] | [ 28 units $\times$ Rs. 5] |

Decision: - On comparing the total additional cost incurred per lot of 1,000 units, we observe that is more economical, if the required materials units are procured from materials source 2.
